The Saudi Economy Will Grow by 7% in 2022
Recent forecasts showed that the Saudi economy will grow by 7 percent during 2022 on an annual basis, supported by the growth of the oil sector, as well as the strong levels of the non-oil sector. According to a report issued by Jadwa Investment Company, the Saudi economy is heading to record a strong growth level during 2021, with the momentum expected to continue next year. Jadwa Investment revised its estimates of the gross domestic product for the whole of 2021 to 2.7 percent, compared to 1.8 percent, while adjusting the growth forecast for the non-oil sector to 5.7 percent, compared to 4.4 percent previously. Jadwa Investment expects the economy to move forward

in the next year thanks to the continued implementation of the Kingdom's Vision 2030, indicating that the next year represents a critical stage in the Kingdom's efforts to diversify the base of its non-oil economy. It also disclosed that economic growth is driven by the growth of the oil sector as a result of the Kingdom's increase in crude oil production in line with year-on-year increases in global oil demand, as the Kingdom's average production of crude oil is expected to reach 10.3 million barrels per day, which means an increase of 14 percent next year, which leads to a rise in gross domestic product at similar levels.

Catastrophic Losses for the Global Aviation Sector as a Result of the "Omicron Variant"

Kamil Al-Awadhi, Regional Vice President of the International Air Transport Association (IATA) for Africa and the Middle East, confirmed that "the impact of the Omicron Variant will be catastrophic, not only on the aviation sector, but on all sectors affected by the pandemic," noting that "the biggest problem lies in the irrational reaction of governments and the way they deal with the new variant."

He stated that "the followed governmental measures appear as if the world is going through a pandemic for the first time, as the closures, travel bans and the return of restrictions have no scientific basis, but are based on fear." He explained that "the most affected countries are South Africa and the surrounding countries, in addition to that, we are witnessing the imposition of restrictions between European countries and the Middle East without a scientific study," calling on governments to "follow scientific approaches based on measures commensurate with the level of risks."

On the expected losses on the aviation sector due to the restrictions, Al-Awadhi revealed that we have estimated the losses since the beginning of Corona at more than 200 billion dollars, and therefore the new restrictions will have greater losses and a devastating impact on the aviation sector.

Al-Awadhi stressed that "travel prevention cannot help control the spread of the virus, but control is carried out with the health precautionary measures followed, whether vaccinations before travel or the obligation to wear masks."
